

MA122 - Computer Programming and Applications

Indian Institute of Space Science and Technology

January 27, 2017

Lecture 7

MA122 -
Computer
Programming
and
Applications

Compound
Assignment

Operator
Precedence

Compound
types

array

1 Compound Assignment

2 Operator Precedence

3 Compound types

4 array

Compound Assignment

MA122 -
Computer
Programming
and
Applications

Compound
Assignment

Operator
Precedence

Compound
types

array

Expression	Equivalent to
$y+ = x$	$y = y + x$
$y- = 5$	$y = y - 5$
$x/ = y$	$x = x/y$
$z* = y + 1$	$z = z * (y + 1)$

Lecture 7

MA122 -
Computer
Programming
and
Applications

Compound
Assignment

Operator
Precedence

Compound
types

array

1 Compound Assignment

2 Operator Precedence

3 Compound types

4 array

Operator Precedence

MA122 -
Computer
Programming
and
Applications

Compound
Assignment

Operator
Precedence

Compound
types

array

Precedence	Operator	Description	Associativity
2	++	Postfix increment	L-R
	--	Postfix decrement	
3	++	Prefix increment	R-L
	--	Prefix decrement	
5	*	Multiply	L-R
	/	Divide	
	%	Modulo	
6	+	Addition	L-R
	-	Subtraction	

Operator Precedence

MA122 -
Computer
Programming
and
Applications

Compound
Assignment

Operator
Precedence

Compound
types

array

Precedence	Operator	Description	Associativity
8	<	Less than	L-R
	<=	Less than or equal to	
	>=	greater than equal to	
	>	Greater than	
9	==	Equal to	L-R
	!=	Not equal to	
13	&&	Logical AND	L-R
14		Logical OR	L-R

Operator Precedence

MA122 -
Computer
Programming
and
Applications

Compound
Assignment

Operator
Precedence

Compound
types

array

Precedence	Operator	Description	Associativity
15	:?	Conditional	R-L
16	=	Simple assignment	R-L
	* =	Multiply and assign	
	/ =	Divide and assign	
	% =	modulo and assign	
	+ =	Add and assign	
	- =	Subtract and assign	

Lecture 7

MA122 -
Computer
Programming
and
Applications

Compound
Assignment

Operator
Precedence

Compound
types

array

1 Compound Assignment

2 Operator Precedence

3 Compound types

4 array

Introducing arrays

```
int ragnar[7];
```

ragnar is an array holding seven values, each of which is a type `int` variable

Figure 4.1 Creating an array.

Lecture 7

MA122 -
Computer
Programming
and
Applications

Compound
Assignment

Operator
Precedence

Compound
types

array

1 Compound Assignment

2 Operator Precedence

3 Compound types

4 array

Introducing arrays continued...

```
1 // arrayone.cpp -- small arrays of integers
2 #include <iostream>
3 int main()
4 {
5     using namespace std;
6     int yams[3]; // creates array with three elements
7
8     yams[0] = 7; // assign value to first element
9     yams[1] = 8;
10    yams[2] = 6;
11
12    int yamcosts[3] = {20, 30, 5}; // create, initialize
        array
13
14    cout << "Total yams = ";
15    cout << yams[0] + yams[1] + yams[2] << endl;
```

Introducing arrays continued...

```
1  cout << "The package with " << yams[1] << " yams
    costs ";
2  cout << yamcosts[1] << " cents per yam.\n";
3
4  int total = yams[0] * yamcosts[0] + yams[1] *
    yamcosts[1];
5  total = total + yams[2] * yamcosts[2];
6
7  cout << "The total yam expense is " << total << "
    cents.\n";
8
9  cout << "\nSize of yams array = " << sizeof yams;
10 cout << " bytes.\n";
11
12 cout << "Size of one element = " << sizeof yams[0];
13 cout << " bytes.\n";
14 return 0; }
```

array initialization

MA122 -
Computer
Programming
and
Applications

Compound
Assignment

Operator
Precedence

Compound
types

array

```
1 #include <iostream>
2 int main()
3 {
4     using namespace std;
5
6     int cards[4] = {3, 6, 8, 10};    // okay
7     int hand[4];                    // okay
8
9     hand[4] = {5, 6, 7, 9};         // not allowed
10    hand = card;                     // not allowed
11
12    float hotelTips[5] = {5.0, 2.5}; //fewer values,
    allowed
```

array initialization continued ...

```
1
2 double earnings[4] {1.2e4, 1.6e4, 1.1e4, 1.7e4}; //
   okay with C++11
3
4 unsigned int counts[10] = {}; // all elements set to 0
5 float balances[100] {}; // all elements set to 0
6
7 long plifs[] = {25, 92, 3.0}; // not allowed
8
9 char slifs[4] = {'h', 'i', 1122011, '\0'}; // not
   allowed
10
11 char tlifs[4] = {'h', 'i', 112, '\0'}; // allowed
12
13 return 0; }
```
